Confluence Formatting Sample

This page is designed to test how native Confluence formatting transforms into Markdown. It includes headings, lists, tasks, decisions, panels, tables, expands, code, links, dates, statuses, emojis, and layout sections.

1. Inline Formatting

This paragraph includes **bold text**, *italic text*, underlined text, ~~striketrough text~~, inline code, subscript, ^{superscript}, red text, and highlighted text.

Here is an emoji 🚀, a date Sep 6, 2026, and a status lozenge READY.

2. Links and Smart Links

Use a normal link when text needs to flow in a sentence: [Atlassian website](#).

- ▶ [Confluence Cloud support | Confluence Cloud | Atlassian Support](#)
- ▶ [Confluence: AI Workspace for Knowledge & Collaboration](#)

3. Lists

Bullet List

- First bullet item with supporting context
- Second bullet item
 - Nested bullet item A
 - Nested bullet item B
- Third bullet item

Numbered List

1. Prepare sample content
2. Run transformation engine
3. Compare Markdown output

Task List

- ☒ Confirm headings convert correctly
- ☐ Validate table rendering
- ☐ Review panel and expand output

Decision List

- ✎ Use this page as the canonical formatting regression sample.
- ✎ Decide whether to include attachment and media examples later.

4. Panels

 **Info:** This is an informational panel for general notes.

 **Note:** This note panel highlights context that should be preserved.

 **Success:** This success panel represents a positive outcome.

 **Warning:** This warning panel calls attention to a risk.

 **Error:** This error panel represents a critical issue.

5. Blockquote and Code

Markdown conversion should preserve quoted content as a blockquote and avoid flattening it into a regular paragraph.

```
1 function transform(input) {
2   return input.trim().toUpperCase();
3 }
4
5 console.log(transform('native confluence formatting'));
```

6. Table Formatting

	Format	Example	Expected Markdown Check
1	Status	IN PROGRESS	Status text and color meaning are retained where possible.
2	Rich text	Bold , <i>italic</i> , and <code>code</code>	Inline marks remain readable.
3	Lists in cells	• Cell bullet one • Cell bullet two	Nested cell content does not collapse unexpectedly.
4	Colored cell	Light blue background	Background may become plain text

metadata or be dropped.

7. Expand Section

✓ Click to reveal detailed transformation notes

This expand contains hidden content that should still be available to the ingestion pipeline.

- Nested paragraph content
- Nested list content
- Another item with **bold emphasis**

 Panel inside an expand for nested formatting coverage.

8. Two-Column Layout

Left Column

This column contains summary content and a status: SAMPLE.

- Left item one
- Left item two

Right Column

This column contains a date and formatted text: Sep 6, 2026.

1. Right step one
2. Right step two

9. Horizontal Rule and Closing Notes

End of sample page. Use this content to validate transformation behavior across a broad set of native Confluence formatting features.
